

H-ISAC Shared Services Program

Health Information Sharing and Analysis Center (H-ISAC) is a global, non-profit, member-driven organization that offers the health sector a trusted community and forum for coordinating, collaborating, and sharing vital threat intelligence and best practices. Additionally, we offer a portfolio of products and services, or Shared Services, that have been identified and developed specifically to help health sector members manage their day-to-day threat intelligence.

Strategic Focus

We have identified seven strategic areas critical to securing members' operations. All H-ISAC Shared Services conform to at least one of the following areas:

- Intelligence and Operations
- Identity
- Resilience
- Medical Device Security
- Physical Security
- Third-Party Risk
- Education

Members First

The goal of H-ISAC Shared Services is to provide members with valuable solutions to protect their organization, and subsequently, the entire health sector. Therefore, member input is used to determine the type and scope of new Shared Services with priority on affordability. To ensure services continue to add value to our members, H-ISAC meets with the vendors on a regular basis to review leads, member feedback, and communication activities.

Vendor Benefits

Vendors who take part in the H-ISAC Shared Services Program view it as their contribution to securing the health sector. Assisting with critical industry-related issues can generate significant goodwill within this tight-knit community. Participating vendors are able to position their companies as thought leaders while obtaining customer input and feedback first-hand. These opportunities are invaluable to grow both their brand and customer base.

Current Solutions

H-ISAC currently offers Shared Services for Digital Monitoring, Identity Management, Third-Party Risk, and Threat Intelligence.

Feel free to email us at sharedservices@h-isac.org if you would like to learn more.
