Security Advisory For Spring4Shell
(CVE-2022-22965)

Initial Publication Date: April 27, 2022
Date Revised: May 17, 2022

SUMMARY
STERIS is aware of the recently announced critical vulnerability Spring4Shell (CVE-2022-22965). According to information posted on the supplier’s (Spring) website, the vulnerability impacts Spring MVC and Spring WebFlux applications running on JDK 9.0 or later. The specific exploit requires the application to be packaged and deployed as a traditional WAR on a Servlet container. If the application is deployed as a Spring Boot executable jar, i.e., the default, it is not vulnerable to the exploit. However, the nature of the vulnerability is more general, and there may be other ways to exploit it.

For a more detailed description of this vulnerability, it is recommended that Customers review the information provided by Spring and CISA.

RESPONSE
To date, STERIS has assessed the list of STERIS products below. We have determined that these products do not contain the vulnerable component and are, therefore, not impacted by the critical vulnerability reported in CVE-2022-22965. Because this vulnerability only impacts Java-based products using the Spring Framework the following STERIS products are not vulnerable.
Additionally, as of the writing of this advisory, there are no known reported incidents involving STERIS products or solutions.
